

System # 4 XW Off Grid System \$10,550.00

The XW Power System consists of several devices, components, and optional accessories that, when installed together, create a renewable energy power system that can be customized to suit nearly any application—off grid, grid tied, or backup. Up to three inverters can be installed in parallel to create larger 120/240 V 3-wire, single-phase systems allowing for increased capacity.
